

Techno Info

GENERAL SYSTEM POINTS

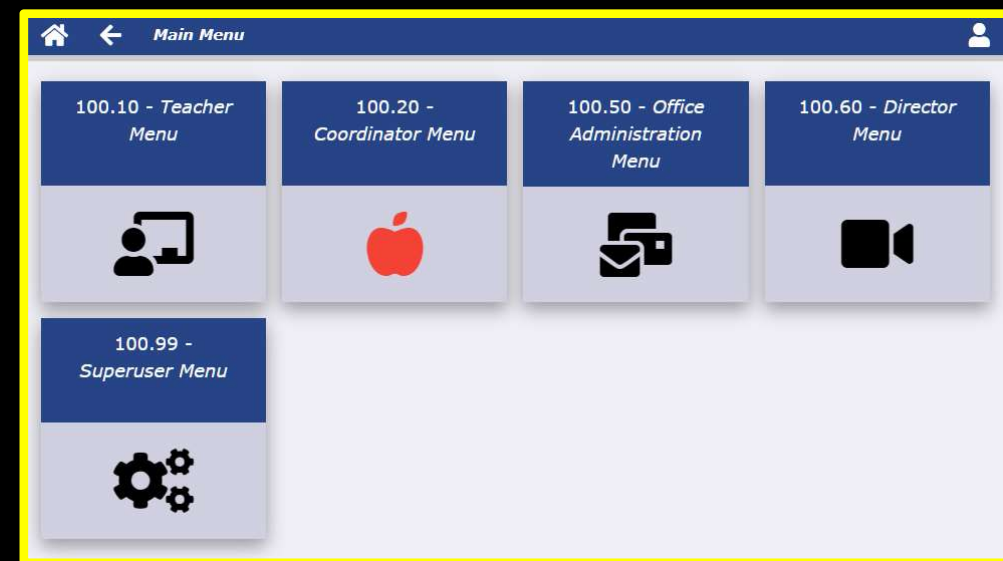

- Web-based, so no requirements on local servers or special software (other than Chrome or other browser).
- Mobile-friendly, so works with all sized devices – PCs, Macs, tablets, iPads, & smartphones.

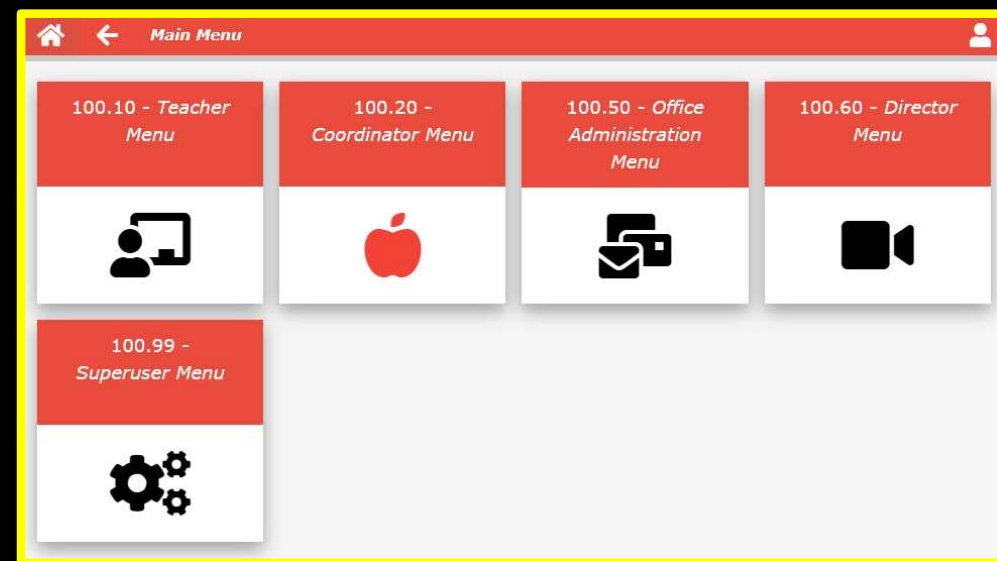

Mobile Friendly

BACKUPS, PROD VS. TEST

- Hosted (& monitored) environment, including daily backups.
- Nightly refresh of a Test environment so you can experiment with last night's data whenever needed.
- Color scheme / theme to match your colors. Helps to provide a cohesive look and feel to the environment. **Also helps to make it visually obvious if you are in the Production or Test environments.**

Production (Real-Time Data)

Test (Yesterday's Live Data)

SECURITY & FILTERS

- All communication via secure protocols (HTTPS, SSL, etc.)
- Group-style security at individual menu item level. Add or remove individual users from groups as needed.
- Now includes student-level data security!
 - Example – A user is worthy to update information via a certain screen, but only for kids who are 4' to 4.5' tall (or perhaps some more useful designation). That access can be controlled in a way that is transparent to the end user. They don't have to learn some other screen or process to do certain functions. Additionally, they can do the same thing to themselves WITHIN the group of kids they have been given access to!
 - For example, a teacher may have access to 20 students controlled at the admin level, but that same teacher may have a lot to do with students 1, 2, and 7, from the group of 20. The teacher can then limit their own view within the 20 to just those 3! When they are ready to work on other students information, a few clicks can change their filtered views to some other kids in that group.

IMPOSED SYSTEM LIMITS

- Amount of disk space available for attached files is 10 GB (or roughly 120 documents each for 250 students).
- Reports exist for you to monitor consumption by student or user. This is a great help in figuring out who needs training about the resolution of embedded pictures in documents.
- Additional disk space available as needed.
- Concurrent transactions > 11,000 / second at current configuration
